User   Manual

KT-TF01 E-Bike Special Meter

WWW.SZKTDZ.COM

Contents

Preface

The illustrated manual will help you understand and be familiar with the meter function, guiding you on how to operate the meter, how to set the project parameters, how to achieve the best match of the three as motor, controller and meter to improve electronic control performance of the electric motor. This manual covers installation, operation,

parameter setting of the meter and how to use it properly, which help you resolve the problems appeared in practical use.

Outlook and Size

○ **Meter Dimension**
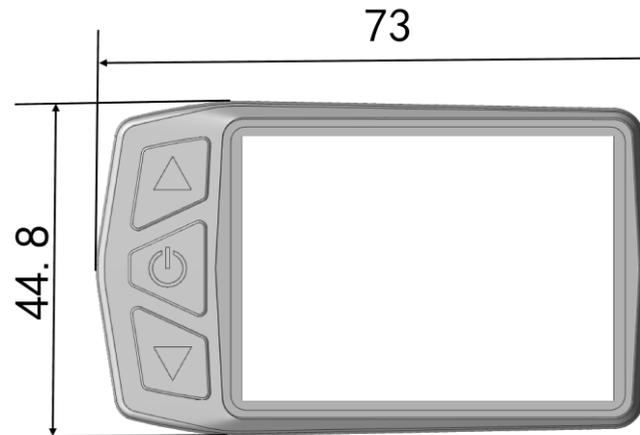

Meter Dimension
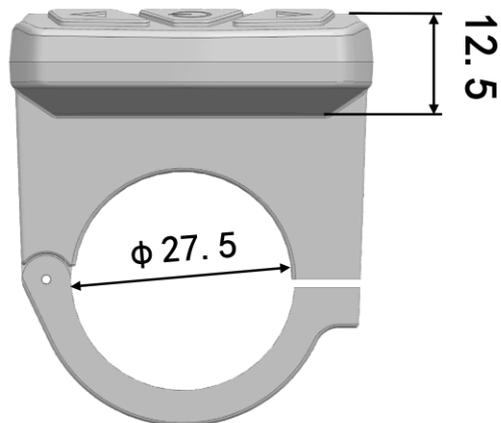

Dual Bracket Mounting Dimension

○ **Main Material and Color**

PC material is mainly used for KT-TF01 meter and button box housing, and the housing color is black.

○ **Wiring Schematic**

36V Control	Red Blue
GND	Black
Data1	Green
Data2	Yellow

Installation Instruction

The meter body and button box are mounted on the handlebars of the electric vehicle, adjusting perspective. In the case that the vehicle is power off, the meter connectors are in plug connection to corresponding controller connectors. Turn on the power, electric vehicle and meter will be under normal operation, the meter installation is finished. The protection film on meter display panel should be torn.

○ Physical installation icon

Function Overview

KT-TF01 meter provide you with a variety of functions such as vehicle controls and vehicle status digitized displays to meet the trip demands.

◇ Trip time display (with displays of a single trip time (**TIM**) and total trip time (**TTM**));

◇ Trip speed display (with displays of real-time speed (**KM/H** or **MPH**) and a single maximum speed (**MXS**) and a single average speed (**AVS**));

◇ Trip distance display (with displays of a single trip distance (**DST**) and total trip distance (**ODO**));

◇ Display of turned on throttle (**THROTTLE**);

◇ Display of turned on PAS (**ASSIST**)

◇ Power assistant ratio (or **throttle**) gear (**ASSIST**) switch;

◇ 6KM/H power assistant push ( ) function;

◇ Cruise function (**CRUISE,**);

◇ Battery capacity indicator ( );

◇ Real-time battery voltage (**VOL**) display;

◇ Motor power ( ) and temperature (**MOTOR** ℃) display;

◇ Brake status display ( );

◇ Turn on backlighting and lights ( );

◇ Environment temperature (**℃** or **°F**) display;

◇ Data clearing;

◇ Fault code display;

◇ User parameter setting;

◇24V, 36V, 48V supply voltage can automatic identification and be compatible.

Display Content

The display content is shown as follow.
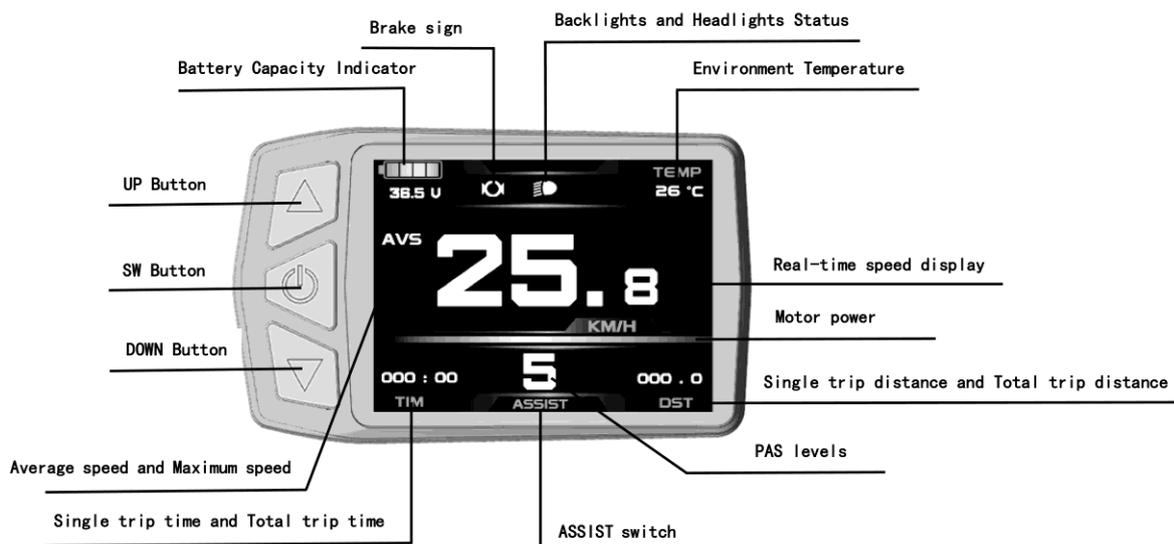

Button Definition

KT-TF01 meter adopts the structural form with part design between the main part and operating buttons.

There are three keys on the operating panel of button box, which are icons of ▲ button (alt text UP), ⏻ button (alt text SW) and ▼ (alt text DOWN).

○ **On/Off**

Hold ⏻ button (SW) long, the meter is powered on and into normal operation, and it provides the controller with power supply. Under normal operating status, hold ⏻ button (SW) long, the meter is powered off, meanwhile to shutdown the power supply of controllers. **When the vehicle is stopped and without any button operation on the meter for five minutes, the meter will automatically shut down, and the power supply of the electric vehicle will be powered off.** In power off mode, the power consumption of the meter and controller is zero.

○ **Display Interface**

Turn on the meter, it will enter display 1, as below picture shows.

Display 1

In display 1, hold ⏻ button (**SW**) shortly to enter display 2.

Display 2

In the riding mode after within 5 seconds, display 2 automatically jump to display 1

Display 3

In display 3, hold 🔘 button (**SW**) shortly, meter will enter display 1, and so on.

In each display interface, if you hold 🔘 button (SW) long, the meter will be powered-off together with that of the controller.

○ **Display of Turned on Throttle**

Rotate the throttle control handle under normal operating of the meter, the display interface shows the logo of turned-on throttle, see the Figure below.

○ Display of Turned on PAS

Turn on PAS under normal operating of the meter, the display interface shows the logo of turned-on pas, see the Figure below

○ PAS Ratio (or throttle) Gear Switch

Under normal operation, hold [UP image] button **(UP)** or [DOWN image] button **(DOWN)**shortly to switch the power assist ratio (or **throttle**) gear **(ASSIST)**, changing motor output power. Switching range is 0-5 gear, gear 1 is for the lowest power, and gear 5 is for the highest power.

At every startup, the meter will automatically restore gear of (this can also be configured as required by users) when it was shut down at last time. When the power assist ratio is gear 0 zero, there's no power assist function.

○ **Power Assistant Push Function**

Users can use 6KM/H power assist function when pushing vehicles. Hold button **(DOWN)**for a long time, the meter assist function logo ( ) flashes, the vehicle drives at the speed of no more than 6km/h. Release button **(DOWN)**, the assist function will be revoked.

○ **Cruise Function**

When C7 parameter setting is 1 (see C parameter setting), the cruise function is enabled, hold button **(DOWN)** long to enter the cruise status when the vehicle speed is more than 7 km/h, and the cruise function logo (**CRUISE**) lights. Brake or press any button to revoke cruise function.

○ **Startup Backlights and Headlights**

Hold ▲ button **(UP)** long, the backlights turns on as well as the vehicle headlights **(the Controller should have headlights driving and output functions),** meter backlighting and vehicle lights power logo ( ) light, hold ▲ button **(UP)** long again to turn off backlights and vehicle headlights.

○ **Brake status display**

Under normal operation, the brake status indicator ( ) will display when the vehicle brakes, as the below picture shows.

○ **Battery Capacity Indicator**

The meter can automatically identify 24V, 36V, 48V battery capacities when it is supporting used with the specified controller. When the battery capacity is over 70%, the four section of power are all light, when the battery capacities drop, the four power displays are off in order, when the power capacity is less than 15%, the four power displays are totally turned off.

When the controller is power off due to voltage shortage, the power display frame flashes, indicating the vehicle has been in voltage shortage and waiting for shutdown currently.

 Voltage shortage flashes

Battery capacity indicator

○ **Environment Temperature**

After startup, the environment temperature will be displayed in environment temperature display column.

The temperature display value may be in deviation shortly after boot-up, and the display value will be gradually approaching the environment temperature within 10 minutes after boot-up.

○ **Single Data Clearing**

5 seconds after the meter is powered on, at display 1, hold both the [UP] button **(UP)** and the [DOWN] button **(DOWN)** simultaneously for about 2 seconds, the single trip time (**TIM**) and single trip distance (**DST**) flicker, then hold [SW] button shortly **(SW),** the record contents of both will be cleared.

Under the status of data flashing, if there were no operations on the data within 5 seconds, the meter will automatically return to display1 and the original record content will be preserved.

○ **Automatically Prompt Interface**

Error Code Display：

If the fault is rectified, automatically return to the normal interface.

Error Code & Definition Table：

Error Code	Definition
Motor position sensor fault!	illegal signal for hall sensor
Motor or controller short circuit fault!	there is a short-circuit fault occur
THROTTLE fault!	illegal signal for throttle

Motor operating temperature alarm：

Under any interface, when the motor operating temperature exceeds the warning value, the motor operating temperature display flashes to alarm, meanwhile, the controller will offer the appropriate protection to motor.

User Setting Project

KT-TF01 meter user setting project：

◇ General project setting

◇ P parameter setting

◇ C parameter setting

◇ L parameter setting

General Project Setting

○ **Maximum Trip Speed**

Max speed setting LIM, hold 【⏻】 button shortly **(SW)** when the cursor before LIM,

the value flash. To setting max speed by press ⬆ button **(UP)** or ⬇ button **(DOWN). The default value of max speed was set according to user's requirement.** The motor will stop, when the speed exceeds the max speed which has been set before

3	MPH	Mil	°F（Fahrenheit）

After finishing the metric/imperial units setting, press ![button] button shortly **(SW)** to

return to parameter setting interface.

P Parameter Setting

○ **P1 Motor Characteristic Parameter Setting**

P1 is motor characteristic parameter setting, P1 = motor gear reduction ratio× number

of motor magnet pieces, just rounding if there's any decimal.

Under parameter setting interface, move cursor to P1 and press ⏻ button shortly (**SW**), the value flashes. press button (**DOWN**) 🔺 button (**UP**) or 🔻 button (**DOWN**) for selection within the range of 1-255.

NEXT❯	

P2 is wheel speed pulse signal setting, if wheel generated 1 pulse signal by a revolution, P2 should be set as1. If wheel generated 6 pulse signals by a revolution, P2 should be set as 6. If users didn't configure the pulse signal system, and then P2 parameter setting can be 0. The setting range of P2 should be between 0-6, hold 🔺 button (**UP**) shortly or 🔻 button **(DOWN)** for selection.

After finishing P2 parameter setting, press ⏻ button (**SW**) to return the parameter setting interface.

Please Note：when P2 parameter is set to be 0, for the built-in clutch motor, there will be the following defects, when the internal motor rotors stop or the internal rotor speed is lower than the outer rotor speed, then the speed displayed on the meter is inaccurate!

○ **P3 Power Assist Control Mode Setting**

Under parameter setting interface, move cursor to P3 and press ⏻ button shortly (**SW)**, the value flashes.

LIM : 25km/h	C1 : 2
DIM : 26"	C2 : 0

0	Meter uses TF01 new version of communication protocol, it is' compatible with LCD1 and LCD2.
1	Meter uses LCD1 and LCD2 old version communication protocol, it is not compatible with second-generation display.
2	As data source for copying parameters, the meter transfers data to other second-generation meters.
3	As data source for copying parameters, the meter transfers data to other third-generation meters.
4	As data source for copying parameters, the meter transfers data to other fourth-generation meters.

C11 selects 2, hold ⏻ (SW) long for about 2 seconds to save and exit the setting environment, and then the meter is served as data source for copying parameter (see parameter copy), there's source logo on display interface.

Data Source Display Interface

After finishing C11 parameter setting, press ⏻ button (**SW**) to return to parameter setting interface.

○ **C12 Controller Minimum Voltage Adjustment Setting**

Under parameter setting interface, move cursor to C12 and press ⏻ button shortly

(SW), the value flashes.

▶C12 : 4	
C13 : 0	
C14 : 2	
C15 : 6	
L1 : 0	
◀ BACK	

C12 is controller minimum operating voltage adjustment setting (tiny adjustment of voltage shortage), the default value is 4, and the setting range is 0-7, press ▲ button **(UP)** or ▼ button **(DOWN)** for selection.

C12 parameter definition table：

C12 value	Minimum Voltage(V)		
	24V Controller	36VController	48VController
0	Default value-2V	Default value-2V	Default value-2V
1	Default value-1.5V	Default value-1.5V	Default value-1.5V
2	Default value-1V	Default value-1V	Default value-1V
3	Default value-0.5V	Default value-0.5V	Default value-0.5V
4	**Default value 20V**	**Default value 30V**	**Default value 40V**
5	Default value+0.5V	Default value+0.5V	Default value+0.5V
6	Default value+1V	Default value+1V	Default value+1V
7	Default value+1.5V	Default value+1.5V	Default value+1.5V

C12 default value is 4, namely, controller minimum operating voltage (voltage

shortage value); when setting is 5, the default value plus 0.5V, when setting is 4, the default value minus 0.5Vand so on.

After finishing C12 parameter setting, press ⏻ button (**SW**) to return to parameter setting interface.

○ **C13 ABS brakes of the controller and parameters of anti-charge control Setting**

Under parameter setting interface, move cursor to C13 and press ⏻ button shortly **(SW)**, the value flashes.

C13 is ABS brakes of the controller and parameters of anti-charge control setting, the

default value is 0 with the setting range between 0-5, press ▲(UP) button or

▼(DOWN) button to make selection.

C13 parameter definition table:

C13 Value	ABS braking strength	Energy recovery efficiency
0	None	None
1	Class 1 braking strength	Best energy recovery efficiency
2	Class2 braking strength	General energy recovery efficiency
3	Class 3 braking strength	Weaker energy recovery efficiency
4	Class4 braking strength	Poor energy recovery efficiency
5	Class5 braking strength	Bad energy recovery efficiency

The recommended value of C13 is 1; other values need to be chosen with caution for use.

Be sure to note:

1.the higher is the braking intensity level, and the braking strength will be greater, the greater damage to the motor shaft accordingly.

2. If the battery has a BMS function, disable this function.

After finishing C13 parameter setting, press [⏻] button (**SW**) to return to parameter setting interface.

○ **C14 Power-assist tuning parameters Setting**

Under parameter setting interface, move cursor to C14 and press [⏻] button shortly **(SW)**, the value flashes.

C14 is the parameters of power-assist tuning setting, with the default value of 2. The power-assist is between1-4 gear, and it is invalid until P3 equals to 1. The setting range 1-3, and press [▲](UP) button or [▼] (DOWN) button for short to make selection.

C14 parameter definition table:

C14 Value	Assist strength of intelligent pedal motor
1	Weak assist strength of motor
2	General assist strength of motor
3	Stronger assist strength of motor

After finishing C14 parameter setting, hold [⏻] button **(SW)** shortly to save the current set values and enter C15 parameter setting interface.

○ **C15 Push-assist Speed Parameters Setting**

Enter C15 parameters setting interface, C15 flashes.

C15 is the setting of push-assist speed, default value is 6, range from 4-6, press[▲](UP) button or [▼] (DOWN) button to choose.

C15valte	Push-assist speed
4	4Km/H
5	5Km/H
6	6Km/H

After finishing C15 parameter setting, hold 🔘 button **(SW)** shortly to save current set values and enter C1 parameter setting interface again. Or hold 🔘 button **(SW)** long for about 2 seconds to exit C parameter setting environment and return to the display 1.

L Parameter Setting

○ **L1 parameter setting**

Under parameter setting interface, move cursor to L1 and press 🔘 button shortly **(SW)**, the value flashes.

L1 parameters are applicable to the automatic under-voltage controller. The default of the factory is 0.

When L1=0, the automatic under-voltage controller can automatically select the under-voltage value according to the battery voltage.

When L1=1, the under-voltage value of the automatic under-voltage controller is forced to be 20V.

When L1 = 2, the under-voltage value of the automatic under-voltage

controller is forced to be 30V.

When L1 = 3, the under-voltage value of the automatic under-voltage

controller is forced to be 40V.

After finishing L1 parameter setting, press ⏻ button **(SW)** to return to parameter

setting interface.

○ **L2 parameter setting**

Under parameter setting interface, move cursor to L2 and press ⏻ button shortly

(SW), the value flashes.

L2 parameter is suitable for the super high-speed motor controller. The default of

the factory is 0.

L2 parameter will be activated when the value of P1 parameter exceeds 255. L2
parameter should use in combination with P1.

When L2=0, P1 parameter is set as the calculated value.

When L2=1, P1 parameter is set as a half of the calculated value.

〈 BACK	

After finishing L2 parameter setting, press button **(SW)** to return to parameter setting interface.

○ **L3 parameter setting**

Under parameter setting interface, move cursor to L3 and press button shortly **(SW)**, the value flashes.

L3 parameter is applicable to the dual mode controller. The default value of the factory is 1.

When L3=0, the controller will activate Non-Hall model only when the Hall sensor in the motor fails.

When L3=1, the dual mode controller will choose the proper model to use according to the controller system optimization.

After finishing L3 parameter setting, press button **(SW)** to return to parameter setting interface.

○ **L4 parameter setting**

Under parameter setting interface, move cursor to L4 and press button shortly **(SW)**, the value flashes.

L4 parameter is used to adjust the delay time of automatic shutdown of the LCD, the default value is 5, and the range of adjust is 5-120 minutes.

When L4=5, the delay time is 5 minutes.

When L4=6, the delay time is 6 minutes.

When L4=7, the delay time is 7 minutes.

…………….
When L4=120, the delay time is 120 minutes.

After finishing L4 parameter setting, press 🔘 button **(SW)** to return to parameter setting interface.

○ **Exit Parameter Setting**

After each setting, the meter will exit parameter setting interface and return to display 1, If hold 🔘 button **(SW)** for about 2seconds.

Under each parameter setting interface, if there's no button operation on the meter for more than 1 minute, and then the meter will automatically return to display 1, and the original parameters will be saved.

Parameter Copy

Set parameters (include general project parameter, P parameter and C parameter) of all KT-TF01 meter produced by our company according to requirements, and set the meter to be a data source according to the method of **"C11 meter attribute selection setting".**

Use special wiring cables to properly connect the TF01 meter which needs to be copied with this data source according to the diagram.
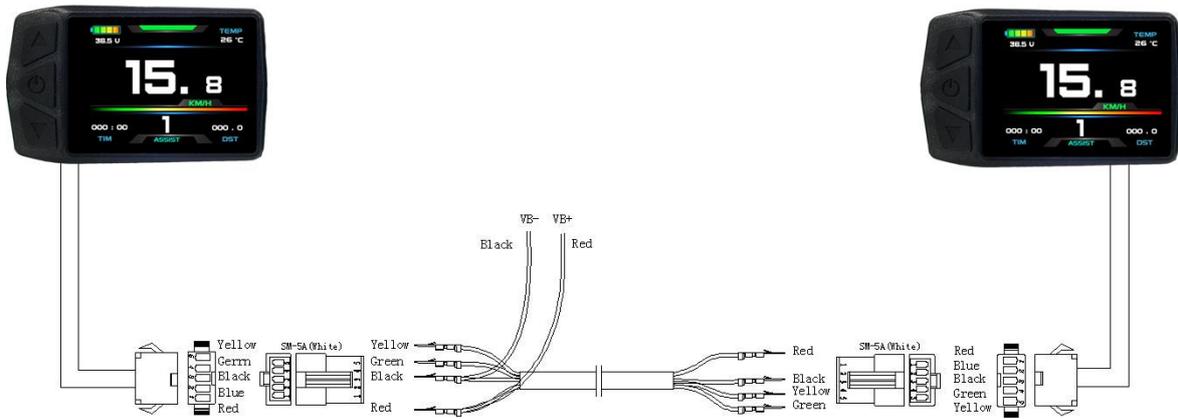

Meter parameter copy wiring diagram
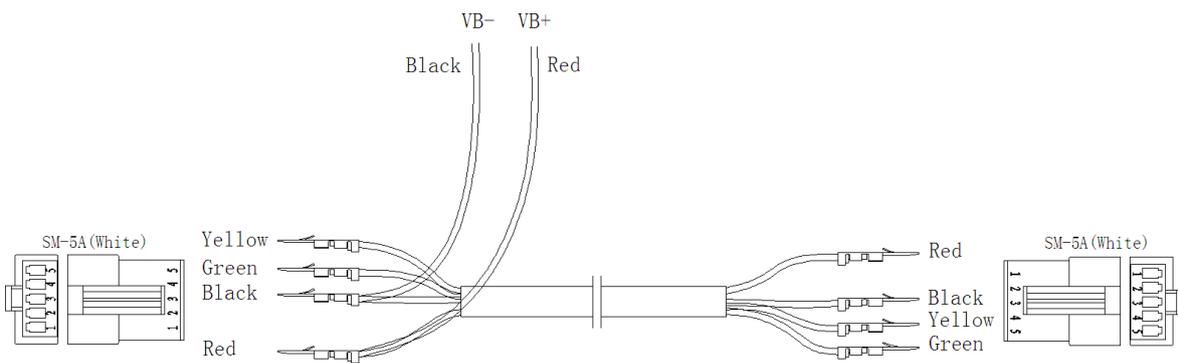

Special wiring cable

Turn on meter power supply of data source. Power supply of 48V or 36V or 24V is available (VB + positive power supply). After wiring the meter needs to be copied, hold [⏻] button long till meter is startup. Within 5 seconds after startup, hold [▲] button (**UP**) and [▼] button (**DOWN**) simultaneously for about 2 seconds, meter parameter copy is completed. If the copy operation is correct, the meter subject to be copied will display as follow.
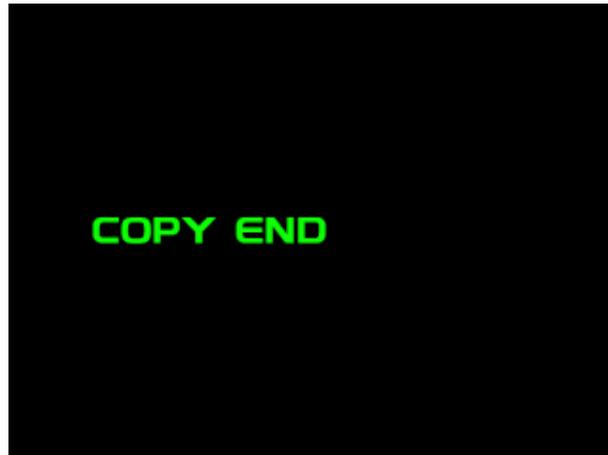

Interface of finishing parameter copy

Please note: Both C9 power-on password and C11 meter attributes can't be copied.

Besides, TF01 meter can only copy parameter of the same meter model.

User Setting Note

After entering the user setting environment, if there's no button operation on the data for more than 1 minute, the meter will automatically return to display1, and the new set parameters won't be saved.

The factory parameter set value and the default value of the meter can be set according to user requirements, the meter parameter can be restored by using **"C10 automatically restore factory setting "** approach when adjusting it.

The parameter of all torque controller and the controller with special function should be according to the result of the actual testing.
